

- 1) The ~~B~~ (or can be created) a token pool which can have 'n' input tokens - associated tokens

- On creation a price is set so ↓
 - 1) pegged against coin $\frac{0.1 \text{ ETH}}{10 \text{ USD}}$
 - 2) USD
 - 3) Stored offchain

- 2) A "reward" or "exchange" account is made for each depositing account to ensure that rewards are fairly distributed over time for a token pool.

- I have a token pool of UNIBAR
- I deposit 100 - I own 100% of rewards
- alices deposits 100 after day 2 the rewards are split 50/50 after day 2

- Pool backend (hidden)
- Laravel management?
- Tailwind UI Frontend
- Trust enterprises API
